DETAILED ACTION

Allowable Subject Matter

1. Claims 13-24 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art in respect to claim 1 does not disclose or suggest a pressure sensor having the measuring cell is axially clamped between the elastic sealing ring and the support ring; and the dimensions of the support ring are matched to the dimensions of the sealing ring and the pressure measuring cell in such a way that a radial deformation of the membrane-containing face caused by the axial clamping of the pressure measuring cell is so small, that the span error of the pressure sensor due to a reduction of the axial clamping force by at least 10% amounts to not more than 0.02%.

The prior art in respect to claim 9 does not disclose or suggest a method for the iterative optimizing of the dimensions of a support ring for a pressure sensor calculating a first and second span change under a first and second axial clamping force, ascertaining a span error by comparing the first and second span change, evaluating the span error and varying the geometry of the support ring and repeating the steps until a suitable geometry for a sufficiently small span error is found.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
